

Universal Database of Medicine & Public Health Periodicals

East View has developed a database of leading Russian medical periodicals, the first database of its kind. Articles cover research on general health statistics, drug and alcohol consumption, AIDS, tuberculosis, venereal, and other infectious and endemic diseases. Presenting a comprehensive picture of the national health situation in Russia, the database contains official publications and independent sources.

The screenshot displays the 'Universal Databases' interface for 'Psikhiatriia'. The page includes a navigation bar with 'main', 'search', 'browse titles', 'help', and 'librarian's corner'. The main content area shows the journal's details in a table format, with a thumbnail of the journal cover on the left. Below the table is a search section with a 'Search this publication' button and a 'Cyrillic keyboard' link. A search box with a dropdown menu set to 'All years' and a 'Search' button is also present. At the bottom, there are radio buttons for 'Russian/English' and 'Transliteration', and a link to the 'Usage Agreement'.

Psikhiatriia	
Subtitle	Nauchno-prakticheskii zhurnal
ISSN	-

Features

East View's online database infrastructure incorporates many of the valuable suggestions received from librarians and end users at subscribing institutions, specifically optimized to help libraries build efficient electronic collections. A few of the major innovations are:

- Personalized interface, easy navigation
- Linking options for OPACs
- Usage log reports
- Downloadable MARC records
- Mirror servers in U.S. and Russia

Although designed to expedite in-depth research, East View's interface maintains a convenient, easy-to-use format that allows:

- Search by author and within article title
- Browsing by specific title and issue
- Saving options-diskette, printer, or email
- Transliteration, Russian, Ukrainian or English language searches
- Virtual keyboard displays
